Ashland College.

The School of the Brethren.
Instructions given in all the common branches, higher mathematics, natural sciences, Latin and German.

A superior training school for teachers. Excellent opportunities to review, or study special branches.

Business course of ten and twenty weeks, specially adapted to farmers, mechanics and others.

A practical knowledge of book-keeping and business, at a cost less than the usual price for board for as much time.

Excellent opportunity to prepare for playing Church and Sabbath-School music, at an expense, less than customary prices for board for the same time.

Location, healthy; influences, wholly moral and religious; privileges in literary work, excellent; instructions, able and thorough; prices, always the lowest.

For information, address
Ashland College,
Ashland, Ohio.

"25 Years in the Poultry Yard"

2nd Edition, 103 pages. How to prevent 1000 and POULTRY CHOLERA, DYSPEPSIA and BOUFE. I wrote it as a system of practical HOG and POULTRY keeping. Symptoms and remedies for all diseases. How to feed Eggs. See in stamps. A copy of "The Cope Poultry Yard" containing full instructions and prices of all varieties of HOGS, A. M. LAMB, Box 540, Cincinnati, O.

HENRY M. STANLEY.

Henry M. Stanley, the noted explorer and traveler, was a native of Wales. At fifteen years of age he ran away to sea, and going to New Orleans, he was there helped and befriended by a wealthy gentleman, whose name Stanley took, his real name being John Rowland. He enlisted in the Confederate service but was taken prisoner and then became sailor in the United States navy. During the war he began a newspaper correspondence with success, and in 1867-68 was sent by the New York Herald to report the British invasion of Abyssinia. In 1870-72 he went in search of Dr. Livingstone, and in the past twelve years he has made himself famous by his explorations of the Congo river, and as founder and general manager of the Congo Free State, a quasi-commercial enterprise, established under the direct protection of Belgium, and by the consent of the European powers, and of which so much has been said during the past two years. Last November he was in America with a view of delivering a course of lectures, but was recalled to conduct a relief expedition to Africa to institute a thorough search for Emin Bey, who led a part of the Khedive's troops in the war with El Mahdi, being now hedged in by the enemy.

Advices of April 25th, state that Mr. Stanley is confident of the success of his enterprise, and hopes by June to be able to render effectual assistance to Emin Bey.

Curative Power of Water.

There is no remedy of such general application and none so easily obtainable as water, and yet nine persons out of ten will pass it by in an emergency, to seek for something of less efficacy. There are but few cases of illness where water should not be given the highest place as a remedial agent.

A strip of flannel or napkin folded lengthwise and wrung out of hot water and applied around the neck of a child that has the croup will usually bring relief in ten minutes. A towel folded several times and quickly wrung out of hot water and applied over the seat of pain, in toothache or neuralgia, will generally afford prompt relief. This treatment in colic works like magic.

We have known cases that have resisted treatment for hours yield to this in ten minutes. There is nothing that will so promptly cut short a congestion of the lungs, sore throat or rheumatism, as hot water when applied promptly and thoroughly. Pieces of batting dipped in hot water and kept applied to all sores and new cuts, bruises and sprains, is the treatment now adopted in hospitals.—*Health and Home.*

MARVELOUS CHANGES.

What the Future Will be to those who refuse to believe.

Is this country unconsciously undergoing a wonderful change, is the change to take place before we are aware of the fact, and when it has taken place will we wonder why we did not see it before it was too late?

Those that see the changes early avail themselves early, and thereby receive benefit.

The shrewd iron man sees the iron interest transferred from Pittsburgh and Pennsylvania to Birmingham, Alabama, and in his far-sightedness sees the furnaces in Pennsylvania torn down and deserted for this new and prolific field. It is claimed by the iron men of Alabama that the low price at which iron can be produced there will revolutionize the iron interests of the world.

We have seen the grain-growing centers of this country shifted to the West. We have seen the pork-packing industry flit from Cincinnati to Chicago, and from thence to Kansas City and Omaha. Southern cotton mills undersell New England and American markets, and challenge the world.

We have seen and are seeing all this take place before our eyes, and know that other changes are taking place equally as prominent, and we wonder as we behold them. Ten years ago the insurance companies only required an analysis of the fluids when they were taking insurance for very large amounts. Today no first-class company will insure any amount unless they have a rigid analysis of the fluids passed, and if any traces of certain disorders are apparent, the application is rejected. In their reports they show that the death of sixty of every 100 people in this country is due either directly or indirectly to such disorders. The Brompton Hospital for Consumptives, London, England, reports that sixty of every 100 victims of consumption also have serious disorders of the kidneys.

Among scientists for the treatment of this dread malady the question is being discussed:

"Is not this disorder the real cause of consumption?"

Ten years ago the microscope was something seldom found in a physician's office; now every physician of standing has one, and seldom visits his patients without calling for a sample of fluids for examination.

Why is all this? Is it possible that we of the present generation are to die of diseases caused by kidney disorders, or shall we master the cause by Warner's safe cure, the only recognized specific, and thus remove the effects? All dealers keep it. It is within the reach of all. It is established beyond a doubt that a very large percentage of deaths in this country are traceable to diseased kidneys. For years the proprietors of Warner's safe cure have been insisting that there is no sound health when the kidneys are diseased, and they enthusiastically press their specific for this terrible disorder upon public attention. We are continually hearing its praises sounded.

This means wonders!

Cannot the proprietors of this great remedy, who have been

warning us of the danger, tell us how to avoid a disease that at first is so unimportant, and is so fatal in its termination? Are we to hope against hope, and wait without our reward?

The most significant of all changes, however, that we of today can note in this radical change of view to which the public has been educated; It was formerly thought that the kidneys were of very small importance; today, we believe, it is generally admitted that there can be no such thing as sound health in any organ if they are in the least degree deranged.

Money in Breeding Good Horses.

The best horses in the world for light service are bred in the United States; indeed it may be said that this country yields a better class of horses for all work than does any other on the globe; but, beyond all question, our road horses are signally superior to those of any other land.

There is money, good, substantial money, not that in small quantity, in breeding horses well, with a fixed end in view. Every farmer has, or may have, a good mare; it may be not one of great intrinsic value, but a mare of good points, well spirited, good on the road, well modeled as a dam, with room to carry and ability to nourish her foal. The mare is capable of doing good service in breeding, equally with that she renders in other labors for her owner.

The farmer's aim should be the production of the best foal possible, because it costs no more to raise a good than a poor colt, and there is no economy in using a cheap or convenient stallion, which a first-class one, of fit blood-lines and high quality, can be had for a little extra trouble and a little more money. Let our readers estimate the value of care in breeding by considering the prices which good stock brings, even when young, and the condition of the markets in cities and large towns, where good well-looking horses, having good action, style, and substance, always are in demand, and they will conclude that it pays to breed well. There is no use in trying to breed valuable stock, if the sire is selected at hap-hazard; breeding is a science, and there can be no sure outcome from either its study or application, unless the progenitor of the stock shall have been thoroughly bred. It is well to use a well-bred mare, whenever this is possible; but a strongly bred sire will unfailingly improve upon the most ordinary bred dam, will more than make good her deficiencies, and compensate for the investment.—*American Agriculturist for May.*

Distress After Eating.

This result of indigestion will no longer be experienced if Simmons Liver Regulator is taken after each meal. It is such a good digester, and so mild and pleasant in its effect that it is used by many after a hearty meal, to insure good digestion. The regulator does not nauseate or irritate the stomach, but corrects acidity, dispels foul gases, allays irritation, and assists the stomach in its digestion.

Newspapers in 1887.

Geo. P. Rowell & Co., of New York, will issue on Monday, May 2nd, the Nineteenth Annual edition of their standard publication, the "American Newspaper Directory."

The new volume contains an exhaustive list of all Class Publications so admirably arranged that any one of the three thousand papers represented there can be readily referred to and all important facts concerning it, together with its circulation rating, easily obtained.

The Newspaper Directory will be used principally by Publishers, Advertisers and Advertising Agents, but the vast fund of information it contains makes it valuable to persons of almost every trade and profession. As a Gazetteer alone it is well worth the price charged \$5.00, for it fully describes every town in which a newspaper is issued, and few people care to know about any place where one is not.

The number of papers published in the United States, Territories (including Alaska) and Canada is put at 15,420; an increase of 581 in one year.

The growth of newspapers in some of the Western States would be a matter of wonder, if it were not that this year is no exception to the rule. In

Kansas the increase is 89 and in Nebraska 64; while the Keystone State shows a smaller advance 85 and the Buckeye State of 30. Pennsylvania exhibits the largest increase in dailies, 17; Kansas in weeklies, 81, and New York in monthlies, 42. Seven States show a decrease; the most prominent instances being New Hampshire and Virginia, six each. The whole volume shows that great care has been taken to sustain its reputation as the most comprehensive work of the kind yet published, and to insure accuracy in every detail. Any thing less than a complete compendium of American newspapers and periodicals would surprise those who are familiar with the former efforts of this firm, who are so well known as the oldest, largest and best known of all the American Advertising Agencies.

The Pittsburg & Lake Erie R. R.

On and after Jan. 23rd, 1887, trains will run as follows: Central Time.
